Dear Customer,

Corporate User Publications, Marlboro, requests your opinion. As you may
know, it is a time-consuming and expensive task to prepare hardcopy, printed
manuals for printing, reproduction, and distribution. Completing this complex
task often prevents us from providing current information with every
distribution of software changes.

Therefore, we believe we can provide you with accurate information on
a more timely basis by distributing documentation files with the
software. This mechanism allows us to provide documentation with
autopatch releases and to distribute that documentation in an
electronic form with the software.

Autopatch Tape 16 for TOPS-10 7.03A contains a software documentation file
that reflects the software on the tape. DIGITAL authorizes you to
make up to two copies of the documentation for use at your site, as
long as you maintain DIGITAL's copyright page. We request that you
print the file and use one of the reply forms to send your opinions to us.

On Autopatch Tape 16, you will find the following documentation files:

1. MONCAL.MEM contains Volume 2 of the Monitor Calls Manual; it uses
    approximately 2600 blocks of disk space. This version of the
    manual contains changes that we have made since the manual was
    printed for TOPS-10 Version 7.03, in May 1986.

2. MCINFO.MEM is a duplicate of this customer letter and the reply form.

MONCAL.MEM is about 775 line-printer pages long and contains change bars
to indicate the pages that have changed. The file contains non-printing
control characters for paging and bolding effect, making it unsuitable for
terminal display. We recommend that you print the file on any supported
line printer.

Please let us know what you think about this method of distributing software
documentation by filling out and returning the following reply form. Your
responses will be considered in future plans for the distribution of TOPS-10
documentation.

Sincerely,
Mary J. Marotta
